## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-30 are rejected under 35 U.S.C. 102(e) as being anticipated by Mukherjee et al (US 6,760,389).

Regarding claims 1-9 and 12-20, Mukherjee, as shown in figures 2-5, teaches a data recovery system comprising clock generator (200, 200a) for generating equally spaced clock signals and sampling unit (205) to sample the data stream (125) using the clock signals. See also column 4, line 53 to column 6, line 35.

Regarding claims 10, 11, 21, and 22, Mukherjee does not explicitly teach a converter to convert an optical data stream to an electrical data stream as claimed. However, Mukherjee also teaches that the system can also be used for Fibre Distribute Data Interface (FDDI) and incorporating the U.S. Patent No. 5,305,350 for processing the optical signal. See column 4, lines 8-18. Therefore, having a converter to convert an optical data stream to an electrical data stream is anticipated when the system is used for Fibre Distribute Data Interface (FDDI).

Regarding claims 23-30, Mukherjee further teaches a buffer (210) to process and store sampled data.

***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. References Sugai (US 2002/0107670), kocaman et al (US 2004/0030513), and Smith et al (US 2004/0091073) are cited because they are pertinent to sampling data stream using multi-phases clock signals.
